# ANNUAL REPORT

OF THE

Medical Officer of Health

1942.

BOLTON:
HOPKINS & SONS, CENTRAL STREET,
1943.

Digitized by the Internet Archive in 2017 with funding from Wellcome Library

Public Health Department,
Civic Centre,
Bolton.

August, 1943.

To the Chairman and Members of the Public Health Committee:

LADIES AND GENTLEMEN,

I have the honour to present the Report for 1942, the seventy-first Annual Report on the Health of Bolton.

There has been no general deterioration of health under war conditions. The vital and mortal statistics for 1942 would have been very creditable in the best of our peace time years. There were fewer deaths and more births than in 1938. The upward trend in the birthrate has continued, with more births than in any year since 1924. There were only three maternal deaths, the lowest number ever recorded in Bolton. The number of new cases of tuberculosis notified was less than the average of the last ten years and substantially less than the numbers notified in 1941. There were fewer new cases of venereal disease coming for treatment than in 1941, although the number is still greatly in excess of pre-war years. Apart from an expected increase in measles, the incidence of infectious disease has been low. Only speculation is possible on the reasons for the good health of the people during the war, despite the strain of long hours, the black-out, badly ventilated rooms, restricted variety in foods, anxiety, strain and reduced parental care of children. It does, however, seem reasonable to suggest the importance of the wholly admirable way in which the resources of science have been applied in the preparation and use of our available food stuffs. And there are reasons for thinking for everybody that regular employment with an obvious purpose in living are potent factors in promoting health, just as mass unemployment creates that depression of outlook which fosters disease.

The number of patients seeking admission to Townleys Hospital continues to increase. Many sick persons who would have been nursed at home in peace-time are compelled to find treatment in hospital because their relatives are busy with essential war work. Townleys Hospital, and particularly, Fishpool Institution and Emergency Hospital administered by the Social Welfare Committee, have so far been able to meet all the extra demands made on them.

The number of applications for admission to the maternity wards in Townleys Hospital and in Haslam Maternity Home continued to grow. No more beds could be allocated in Townleys for maternity cases, and the Corporation decided to rent the house "Havercroft" for use as a Maternity Home. It will provide for another 360 cases each year.

A large but uncertain number of scabies cases occurred. 913 children and 250 adults received treatment for the condition at the Municipal Medical Baths.

The rate of immunization of the child population against diphtheria has been disappointing. At the end of the year 41.7% of the children under 5 and 54.6% of the children between 5 and 15 had been protected against the disease. The position cannot be regarded as satisfactory until 80% of the child population has been immunized.

A service in pathology and bacteriology for all the Bolton hospitals was inaugurated. A Committee with equal representation from the Royal Infirmary and the Local Authority administers the scheme. The services in the Royal Infirmary, Townleys Hospital and the Borough Isolation Hospital, and for infectious diseases, and public health work generally, are all controlled and supervised by the one joint Committee. Two whole-time pathologists and an adequate staff of technicians are employed in the main laboratories at the Royal Infirmary and at Townleys Hospital. The scheme provides a better service with more co-ordination and no overlapping. It also shows the way for that interchange of staff which must be one of the important factors in promoting full co-operation between municipal and voluntary hospital services.

Finally I would express to the Chairman and members of the Public Health Committee sincere thanks for their continued trust and encouragement in the efforts to meet the demands made on the Department in time of war.

I am, Ladies and Gentlemen,
Your obedient Servant,

R. M. GALLOWAY,

Medical Officer of Health and School Medical Officer.

#### STATISTICS.

#### Births.

There were 2,589 live births to Bolton residents in 1942, 1,341 being males and 1,248 females. 2,476 of these births were legitimate and 113 illegitimate. The birth-rate per 1,000 of the population was 16.4, 1,026 births occurred to Bolton residents in Townleys Hospital, and 390 in Haslam Maternity Home.

#### Stillbirths.

The number of stillbirths in Bolton in 1942 was 106, giving a stillbirth-rate of 39·3 per 1,000 total births. The number of stillbirths per 1,000 total births in the County Boroughs of England and Wales has varied between 33 and 43 since 1931. Bolton has had a rate persistently higher than the average of the county boroughs.

#### Deaths.

Bolton had 2,212 deaths (1,076 males, 1,136 females) in 1942, giving a death-rate of  $14\cdot0$  per 1,000 of the population.

During the year, 771 persons, whose usual place of residence was in the area of this county borough, died outside the borough; of these, 671 died in Townleys Hospital or Fishpool Institution and 46 died in Mental Hospitals.

Non-residents who died in the area numbered 126, of whom 112 died in Bolton Royal Infirmary.

210 Bolton residents died in Bolton Royal Infirmary.

# Deaths from Puerperal Causes.

Maternal mortality is the number of deaths of women classed to pregnancy and child-bearing. It is expressed as the rate per 1,000 births (live and still) and is sub-divided into the deaths due to puerperal sepsis, including septic abortion, and the deaths due to all other causes arising from pregnancy and the puerperium.

There were 3 deaths from purperal causes in 1942, giving a maternal mortality-rate of 1·11. This is the lowest number recorded in Bolton. The rate for England and Wales was 2·02.

In addition to the 3 deaths directly due to pregnancy and child-bearing, there were two deaths where pregnancy was a contributory cause. The deaths were assigned to (1) chronic myocarditis, and (2) cancer of cervix.

# Death-rate of Infants under One Year of Age.

The death-rate of infants is expressed as the number of deaths under one year per 1,000 live births, and is called the infantile mortality-rate. There were 169 such deaths during the year.

Bolton's infantile mortality-rate for 1942 was 65. The figure for England and Wales was 49, the lowest on record.

Of Bolton's 2,589 live births, 2,476 were legitimate and 113 illegitimate.

The infantile mortality amongst the legitimate children was 58, and amongst the illegitimate 203.

#### Deaths under Four Weeks.

The part of the infantile mortality which occurs in the first four weeks of life is called the neo-natal mortality. There were 35.9 deaths of infants under 4 weeks per 1,000 live births.

The causes of death during the first four weeks of life were as follows:—

Causes of Death	Under 7 days	7 and under 14 days	14 and under 21 days	21 and under 28 days	Total under 28 days
Pneumonia Diarrhœa and Enteritis		1	_ 2	2	3

#### GENERAL PROVISION OF HEALTH SERVICES.

#### LABORATORY FACILITIES.

The local authority employs a whole-time Public Analyst. His report on the work of the department is to be found on page 39.

The pathological examinations made in the Public Analyst's Laboratory during 1942 were as follows:—

		Total	Positive	Negative	Doubtful
Sputum for B. tuberculosis	• • •	216	15	201

Complement fixatio	n test	•••		529	162	
45			, ,			

<sup>\*</sup>Does not include 56 from blood donors.

Medical Officers of the Department examined 343 sputum specimens for B. tuberculosis, 2,204 slides for the gonococcus, 11 slides for syphilis, 2,761 cultures for the diphtheria bacillus, and 12 miscellaneous specimens, in the course of routine clinical work.

During the year a joint service, styled the "Bolton Clinical Laboratories," was inaugurated, between the Local Authority and the Bolton Royal Infirmary. It is administered by a Joint Committee with five representatives from the Royal Infirmary and five from the Council, and controls all the Services in Bacteriology and Pathology in the Borough. It employs two whole-time pathologists and a staff of technicians in the laboratories of the Royal Infirmary and in Townleys Hospital.

PROFESSIONAL NURSING IN THE HOME.

The Bolton District Nursing Association provides nursing in the home for all cases of illness other than certain infectious diseases and maternity nursing.

During the year, 1,989 cases were nursed, and these received a total of 59,413 visits. The nurses were also present at 54 operations.

The Bolton Corporation makes an annual grant of £400 to the funds of the Association. The Public Health Committee pays for any home nursing of the following diseases: puerperal pyrexia, measles, whooping cough, epidemic diarrhea, ophthalmia neonatorum, tuberculosis and influenzal pneumonia.

# Hospitals.

THE BOLTON ROYAL INFIRMARY.

During the year under review the number of cases admitted was 6,186, of whom approximately 34 per cent. were from outside the Borough of Bolton. In addition, 13,971 cases were dealt with as out-patients and 12,307 cases were received into the casualty department. At the end of the year there were 384 patients on the waiting list for admission.

The Edmund Potter Hospital, an auxiliary to the Bolton Royal Infirmary, has 43 beds for females. All the patients who are admitted are sent from the Bolton Royal Infirmary for convalescence. 909 patients were admitted during the year.

The Blair Convalescent Hospital, Bromley Cross, is a voluntary institution with 42 beds for male patients only. 658 cases were admitted in 1942.

# TOWNLEYS HOSPITAL.

The following statistical return relates to the year ended 31st December, 1942:—

Total No. of admissions (including infants born in hospital)	6,274
No. of women confined in hospital	1,569
No. of live births	1,498
No. of stillbirths	87
No. of deaths among children under 4 weeks of age	
(born in hospital)	55
Total No. of deaths among children under 1 year	107
No. of maternal deaths among women admitted to	
hospital for confinement	5
Total No. of deaths	771
Total No. of discharges (including infants born in	
hospital)	5,556
No. of cases whose total stay was for the following periods:—	
(a) Under 4 weeks	5,100
(b) 4 weeks and under 13 weeks	947
(c) 13 weeks or more	280
No. of beds occupied (excluding cots in maternity wards):—	
(a) Average during year	402
(b) Highest (17th February, 1942)	478
(c) Lowest (24th December, 1942)	338
No. of operations under general anæsthetic	720
Ante-natal Clinic:—	
Total No. of expectant mothers seen	1,611
No. of attendances	9,334

<sup>(1)</sup> Includes—with the exception of Acute Primary and Influenzal Pneumonia,
Tuberculosis, Puerperal Pyrexia—all generally notifiable diseases,
together with Measles, German Measles, Chiekenpox, Whooping Cough
and Mumps. Cases of Influenzal Pneumonia, Tuberculosis, Puerperal
Pyrexia, and Acute Primary Pneumonia are recorded respectively under
Groups B, C, G and M. Cases of Encephalitis Lethargica are entered
under Group A if acute and under Group I, if chronic.

<sup>(2)</sup> Includes Acute Influenzal Pneumonia.

<sup>(3)</sup> Confined to cases and deaths in which no more specific diagnosis was practicable.

<sup>(4)</sup> Includes suicides, attempted suicides and poisoning cases.

#### MATERNITY AND CHILD WELFARE.

# Midwifery and Ante-Natal Work.

#### 1—Domiciliary.

The following figures give a statistical summary of the work in relation to domiciliary midwifery for the year:—

- (a) Ante-natal clinics—Public Health Department (2 weekly).
  418 expectant mothers attended and made 1,426 attendances.
  120 X-ray examinations were made in the department.
- (b) Confinements conducted by midwives.
  1,015 confinements were conducted by midwives.
- (c) Confinements conducted by medical practitioners.

  In addition to the 289 cases where practitioners were called in by the midwives, the doctors conducted approximately 160 confinements.

The following table gives particulars of the domiciliary midwives' work during the year:—

No. of midwives who have practised	•••	32
No. of cases attended	•••	1,015
Average No. of cases per midwife		30
No. of calls for medical aid		289
Per cent of cases in which medical aid was sought	t	28%
No. on the register at the beginning of the year		28
No. who ceased to practise in Bolton	• • •	1
No. on the register at the end of the year		31

In addition to the above, the midwives attended 119 cases as maternity nurses.

The following 338 notifications were received from domiciliary midwives in accordance with the regulations of the Central Midwives Board:—

Medical assistance	•••	• • •	•••		•••	289
Stillbirths	•••	• • •				34
Artificial feeding	•••				•••	12
Death of mother or	child		•••	•••	•••	· 1
Liable to be a source	e of infec	tion				2

When a family is not eligible for maternity benefit under the National Health Insurance Acts and the family income falls below a scale approved by the Council, the Public Health Committee pay the midwife's fee for her work at a confinement. During the year 194 such fees were paid.

Home helps were provided in 169 instances. In 68 cases part of the fees were recovered and in 12 cases the whole of the fees were recovered.

#### MUNICIPAL MIDWIVES.

During the year, the nine midwives appointed booked 705 cases, 646 as midwifery cases and 59 as maternity cases, and they made 611 deliveries, or an average of 68 cases per midwife.

The midwives paid 15,161 ante-natal and post-natal visits to their patients during the year.

#### 2—Institutional Midwifery.

# (a) Townleys Hospital.

Three ante-natal clinics are held weekly: During the year, 1,611 patients attended the clinics, 1,336 of whom were Bolton cases.

The following particulars relate to the maternity cases admitted during 1942 from Bolton and from the county areas served. Approximately 70 per cent. of the cases were from Bolton.

1.	No. of maternity beds	99
2.	No. of beds, included in above, allocated to, and	
	reserved for, expectant mothers in need of	
	hospital treatment;	27
3.	No. of cases admitted	1,844
4.	No. of women treated in the beds shown against	
	item 2	453
5.	Average duration of treatment of expectant	
	mothers in the beds shown against item 2	10.0 days
6.	Average duration of stay of all cases	$16 \cdot 6$ days
7.	No. of cases notified as *Puerperal pyrexia	32
	*i.e., rise of temperature to 100.4° F. for 24 hou	ırs,
	or recurrence within that period.	
8.	No. of cases of pemphigus neonatorum	5
9.	No. of infants not entirely breast fed whilst in	
	hospital	125

10.	No. of cases of ophthalmia neonatorum		1
11.	No. of maternal deaths		5
12.	No. of infant deaths:—		
	(a) Stillborn	•••	87
	(b) Within 10 days of birth	•••	36
		•	

# (b) HASLAM MATERNITY HOME.

The following table gives particulars of all cases admitted to the Home in 1942:—

#### DEATHS FROM TUBERCULOSIS.

One hundred and nine Bolton residents were certified as having died of tuberculosis during 1942. This compares with 111 in 1941.

Fifty-nine of these deaths took place in institutions.

The age and sex distribution of those who died from tuberculosis are given in these tables:—

PULMONARY TUBERCULOSIS DEATHS.

#### TUBERCULOSIS DISPENSARY.

The dispensary is open every week-day (except Saturday) from 9 a.m. to 12 noon and on Monday and Friday from 2 p.m. to 5 p.m. The work done at the dispensary is shown by the following figures:—

Total attendances	•••	•••	•••	•••	•••	2,099

#### TREATMENT OF TUBERCULOSIS.

Two hundred and fifty-four persons applied for treatment in 1942. One hundred and thirty-six of these were cases of pulmonary tuberculosis and 110 of non-pulmonary tuberculosis. Eight cases were admitted to hospital for observation.

The treatment given was as follows:-

Residential treatment		•••		139
Domiciliary treatment	•••	•••	• • •	107
Out-patient treatment	•••		•••	8

No patient requiring residential treatment was refused such treatment.

The following table summarizes the residential treatment given during 1942.

ACCOMMODATION PROVIDED BY LOCAL AUTHORITY WITH NUMBER OF PERSONS ADMITTED FOR TREATMENT DURING THE YEAR 1942.

# Ultra-Violet Ray Treatment.

During the year, 805 attendances were made to the Ultra-Violet Ray Department, the majority of the cases being gland tuberculosis. Forty-five new patients were referred; most of them were given ultra-violet ray treatment, and in 8 cases the Kromayer and radiant heat lamps were used.

#### Examination of Contacts.

During the year, 80 contacts were examined at the dispensary or in the home; of these, 3 proved to be tuberculous. It is felt that by an extension of this work the aim and duty of the dispensary will be more fully discharged.

#### ASSISTANCE GIVEN TO NECESSITOUS TUBERCULOUS PATIENTS.

1.	Total number of patients assisted		198
2.	Average time receiving assistance	:	$8\frac{1}{2}$ months
3.	Amount of milk given		26,273 pints
4.	Malt and oil given	•• •••	104 lbs.

#### VENEREAL DISEASES.

The tables on pages 36, 37 and 38 show the work carried out at the Bolton Treatment Centre.

Return relating to all persons who were treated at the Treatment Centre at Bolton Public Health Offices during the year ended the 31st December, 1942.

EDUCATION COMMITTEE.

# ANNUAL REPORT

OF THE

# School Medical Officer

FOR THE YEAR 1942.

R. M. GALLOWAY, M.D., D.P.H. School Medical Officer and Medical Officer of Health.

BOLTON:

HOPKINS & SONS, "CENTRAL PRESS," CENTRAL STREET. 1943.

C.2612.

.

,

· · · · ·

### Public Health Department,

#### BOLTON.

31st May, 1943.

To the Chairman and Members of the Medical Inspection Sub-Committee of the Bolton Education Committee.

The School Medical Officer begs to submit the Annual Report on the work of the School Medical Department for the year 1942. In accordance with instructions the scope of the report is greatly reduced but the more important tables are reproduced to preserve the continuity of annual returns.

#### MALNUTRITION.

Physically the school population does not appear to have suffered during the year. There has been no apparent increase of malnutrition, in spite of some diminution of maternal care. As many as possible of the under-nourished children were kept under observation at the school clinics. An increase of malnutrition has probably been prevented by the large number of school meals provided. During the year, 159,954 free meals and 418,243 paid meals were provided.

#### UNCLEANLINESS.

There has been no diminution in the number of children suffering from vermin infestation.

The cleansing station was transferred in February, 1942 from Rothwell Street Wash-houses to premises in Kingsgate and re-named the "Municipal Medical Baths." Two whole-time women attendants and a part-time male attendant are employed. Verminous conditions of the head are treated on three afternoon sessions weekly. During the year, 375 children received treatment at the baths. Legal proceedings were taken by the Education Department in three cases of children who were persistently neglected and verminous.

#### SCABIES.

There has been a substantial increase in scabies. Five morning sessions and one afternoon are now allotted to the treatment of scabies each week in the Municipal Medical Baths. Special evening sessions are arranged for adult male members of the families. The form of treatment used is the application of an emulsion of Benzyl Benzoate after a hot bath on two successive days. A hot bath only is given on the third day. Every endeavour is made to examine and, if necessary, treat the whole family. 2,963 treatments for scabies were given to 913 children at the Medical Baths during the year.

#### DENTAL DEFECTS.

Of 11,944 children inspected by the dental surgeons in routine and special inspections, 7,235 were found to require treatment and 4,479 received treatment.

The actual figures for the work carried out are as follows:-

ROUTINE CASES—					,	Total.
No. of cases treated						2,669
No. of attendances						4,538
No. of temporary teeth	extra	cted				4,825
No. of permanent teeth	extra	cted				963

No. of temporary teeth	filled					44
No. of permanent teeth	filled					233
No. of general anæsthe	tics ad	minist	tered			409

#### INFECTIOUS DISEASE.

No schools were closed during 1942 on account of infectious disease, but certificates that reduced attendance might reasonably be attributed to the prevalence of epidemic disease were issued on 4 occasions for chickenpox and measles.

The Ministry of Health with the co-operation of the Board of Education continued a general campaign for the immunisation of children against diphtheria. The Bolton Education Committee agreed to their Medical Officers devoting as much time as necessary to this object. The Medical Officers immunised the children in the schools The response of parents to various appeals was reasonably good and approximately 1,902 children between 5 and 15 years and 3,092 children under 5 years were immunised during the year. Most of these children were immunised in schools by the authority's Medical Officers.

# BLIND, DEAF, DEFECTIVE AND EPILEPTIC CHILDREN.

During the year 1942, 8 children were notified to the Mental Deficiency Act Committee of the Lancashire Mental Hospitals Board.

#### PIKES LANE NURSERY SCHOOL:

No. of children on the roll, December, 1942		128
No. of children admitted during 1942		111
No. of children transferred to elementary school	s	70
No. of children removed by parents		10

#### Employment of Children and Young Persons.

Four hundred and fity-four children were examined during 1942 for employment outside school hours in accordance with the Bye-laws made under the Children and Young Persons Act, 1933. Certificates were granted in 392 cases. The corresponding number in 1941 was 400.

Twenty children who had made application for Juvenile Performers' Licences under the Employment of Children in Entertainments Rules, 1933, were examined and licences were granted in each case or the original ones renewed.

#### REMEDIAL SPEECH TRAINING CENTRE.

			270	130
			-	

Six cases from outside areas received treatment.

# CHILDREN UNABLE TO ATTEND SCHOOL THROUGH PHYSICAL DISABILITIES.

The arrangements under this heading remain the same as last year.

During the year, 21 children have been on the books of the teachers, and altogether, 1,432 hours of actual instruction have been given to these children.

#### REMAND HOMES.

- (a) Girls. Ninety-five girls were admitted to the Girls' Remand Home and 80 discharged. Special examinations were required into the mental condition of eight girls. Twenty-nine girls alleged to have been exposed to risk were examined for venereal disease. Five cases of gonorrhæa were found. The routine examination of girls immediately after admission and before discharge was carried out as usual.
- (b) Boys. The Townleys House Remand Home for Boys was opened on March 5th, 1942, and provided accommodation for 25 boys. Up to the 31st of December, 1942, 122 had been admitted. Special examinations were required into the mental ability of 35 boys. The routine examination of all the boys was carried out immediately after admission and immediately before discharge. Three boys were removed to Townleys Hospital, two with septic infection of the hands, and one with tonsillitis. Many of the admissions suffered from minor degrees of impetigo and malnutrition, and several were infected with scabies. The general health of the boys has been excellent. The accommodation of the Home was increased at the end of this year from 25 to 29.
